Bates Technical College Center for Allied Health Education
Forming for the North Elevator and Stair Core ramped up this week. In the photos to the right a column form is being flown and placed near the North Core.
Titan spent most of the week preparing the site for the Slab on Grade placement that will happen next week. In these photos you can see Titan moving, leveling, and compacting soil in preparation for the pour.
Morris Fortmann

This week I thought I would interview myself as you have already met the rest of the project team.

I am from Seattle, Washington and have lived there my entire life. I went to the University of Washington and got a degree in Construction Management. In the summer of 2018, I interned at Walsh and then started full time in 2019 as a Project Engineer.

As a Project Engineer here at Bates. Some of my day to day tasks include writing RFIs, Submittals, and of course these newsletters.

Outside of work I enjoy spending time with my friends, boating/swimming, golfing, or anything outside really. I also enjoy going to UW football games as well. Go Dawgs!
