The shoring wall along Yakima was completed last week (seen above), and this allowed for the excavation of the mat footing and core. Some of Titans work on this excavation can be seen below.
The trenching and placement of electrical conduit and vaults on Brazill can be seen above. This was done so the electrical lines and poles currently above ground could be removed and placed underground.

The formwork was removed from the electrical room stairway was removed. Walsh Concrete also began work on the electrical room to prepare for Level 2.
Mahana Giltamag

About:
Mahana is from the Federated States of Micronesia. She is from the Island of Yap. She has lived in the Pacific Northwest since 1998. Mahana has been with Walsh for 12 years.

Role at Bates:
Mahana is the Project Admin at Bates Technical College. Her responsibilities include hiring, certified payroll, organization, ordering supplies and materials, invoices, and more.

Outside of Work:
Outside of work Mahana likes to go hiking and spend time with family. She also involved with a program that helps coordinate a marathon in Tacoma. The program is called Wainwa, which stands for Waabese in Washington.

The formwork was removed from the second part of the retaining wall this week. Walsh concrete also poured a wall footing along 3 columns for CMU and Brick Veneer.
